

# BP's Oil Spill in the Gulf

Measured in Units of Exxon Valdez

$\frac{1}{3}$

## Exxon Valdez

1 Valdez = 10.8 million gallons of oil spilled off of Alaska in 1989, the loss of more than a quarter million seabirds, the destruction of the way of life for a people, and 21 years and counting of damage for the Prince William Sound ecosystem - all at a cost of less than a year's profit for a major corporation.
